

PDF Gate Regression Fixture

Production access is restricted to authorized personnel and granted using least privilege principles.

Access reviews are performed quarterly (every 90 days).

All external endpoints require encryption in transit using TLS 1.2 or higher (TLS 1.2+).

The minimum TLS version for public APIs is 1.2.

Internal services use mTLS where supported.

Databases and object storage are encrypted at rest using AES-256.

At-rest encryption keys are managed through a centralized KMS.

Backup archives are encrypted at rest using AES-256 and KMS-managed keys.
